Needs and Uses: In an effort to address regional wetland characteristics and improve the accuracy and efficiency of wetland delineation procedures, the USACE Research and Development Center (ERDC) developed ten regional supplements to the USACE manual, the most recent of which were issued in 2006. In developing the regional supplements, the USACE recognized that a single national manual is unable to consider regional differences that are important to the identification and functioning of wetlands. The wetland indicators and guidance provided in the 10 regional supplements are designed to be used in combination with the USACE manual to identify wetland waters of the United States. These forms are most often completed by USACE Project Managers or environmental consultants, but may also be completed by applicants themselves. The Automated Wetland Determination Sheets (ADSs) in this collection package streamline the information collection process by incorporating reference material and analytical processes directly into the form, which is provided as a Microsoft Excel document rather than the PDF form included in the regional supplements. The ADSs also automatically complete data analysis using inputted information, saving users time and effort and reducing the likelihood of human error. Applicants for USACE permits are generally required to submit JDs as part of their permit application or in support of the permit evaluation process. If wetlands are present, the USACE generally requires that JDs include adequately documented wetland data sheets in order for the JD to be considered technically adequate. The ADSs are formatted such that they may be readily
