

HOW TO SPOT A TECH SUPPORT SCAM

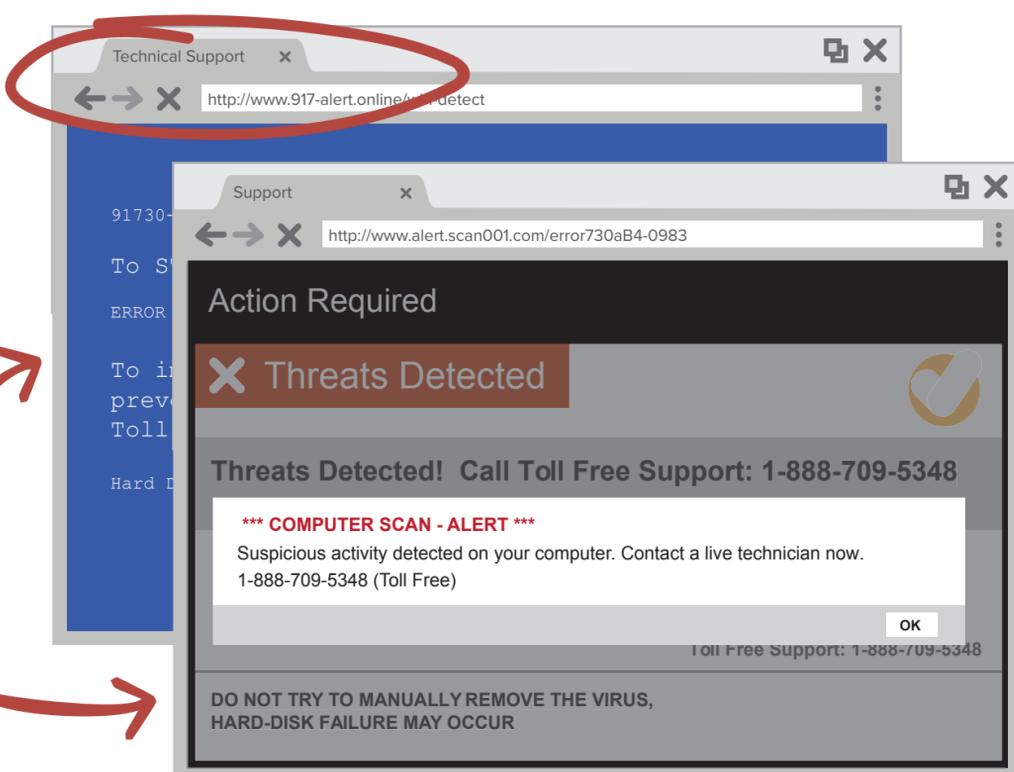

It can start with a call from someone pretending to work for Microsoft, Google or Apple.

Most often, it starts with a pop-up...

Shows up within your **internet browser**

Might **imitate** a blue error screen

or trusted antivirus software

CALL	NOW	OR ELSE...
Wants you to call a toll-free number	Urges you to call immediately	Threatens that you may lose personal data if you don't call

Then, you call a toll-free number. The scammer might:

ask you to give them remote access

tell you they've found a virus or other security issue

pretend to run a diagnostic test

try to sell you repair services or a security subscription

Then, you're asked to pay a fee.

The scammer provides "services" that range from:

WORTHLESS

things you can get elsewhere for free

things you already have

"fixing" a problem that doesn't exist

subscriptions that don't do anything

installing malware

MALICIOUS

WHAT YOU CAN DO:

- ➔ If you get a pop-up, call, spam email or any other urgent message about a virus on your computer, **stop**.
 - Don't click on any links or call a phone number.
 - Don't send any money or make a wire transfer.
 - Don't pay with a gift card.
 - Don't give anyone your bank account, credit card or other payment information.
 - Don't give anyone control of your computer.

Legitimate companies do not display pop-up warnings that ask you to call a toll-free number about viruses or security problems.
- ➔ **Report it** at ftc.gov/complaint. Include the phone number that you were told to call.
- ➔ Keep **your security software** up to date. Some companies like Microsoft offer free antivirus and firewall software that can help keep your computer safe.
- ➔ If you need help, **contact a computer technician** that you trust. Don't just rely on an online search.
- ➔ **Tell someone** about this scam. You might help them spot it and avoid a costly call.
